Transformations and Symmetry

··Then

⦿ In **Chapter 4**, you learned to identify reflections, translations, and rotations.

··Now

⦿ In **Chapter 9**, you will:

- ▪ Name and draw figures that have been reflected, translated, rotated, or dilated.

- ▪ Recognize and draw compositions of translations.

- ▪ Identify symmetry in two- and three-dimensional figures.

··Why? ▲

⦿ **PHOTOGRAPHY** Photographers use reflections, rotations, and symmetry to make photographs interesting and visually appealing.
Get Ready for the Chapter

Diagnose Readiness | You have two options for checking prerequisite skills.

1 Textbook Option Take the Quick Check below. Refer to the Quick Review for help.

QuickCheck	**Quick**Review

QuickCheck

Identify the type of congruence transformation shown as a *reflection*, *translation*, or *rotation*. (Lesson 4-7)

1. A to B

2. D to A

3. A to C

QuickReview

Example 1

Identify the type of congruence transformation shown as a *reflection*, *translation*, or *rotation*.

Each vertex and its image are the same distance from the y-axis. This is a reflection.

QuickCheck

Find the sum of each pair of vectors. (Lesson 8-7)

4. $\langle 13, -4 \rangle + \langle -11, 9 \rangle$ **5.** $\langle 6, -31 \rangle + \langle -22, 3 \rangle$

6. BAND During part of a song, the drummer in a marching band moves from (1, 4) to (5, 1). Write the component form of the vector that describes his movement.

QuickReview

Example 2

Write the component form of $\overrightarrow{AB}$ for $A(-1, 1)$ and $B(4, -3)$.

$$\overrightarrow{AB} = \langle x_2 - x_1, y_2 - y_1 \rangle \quad \text{Component form of vector}$$
$$= \langle 4 - (-1), -3 - 1 \rangle \quad \text{Substitute}$$
$$= \langle 5, -4 \rangle \quad \text{Simplify.}$$

QuickCheck

Determine whether the dilation from A to B is an *enlargement* or a *reduction*. Then find the scale factor of the dilation. (Lesson 7-6)

7.
8. PLAYS Bob is making a model of an ant for a play. Find the scale factor of the model if the ant is $\frac{1}{2}$ inch long and the model is 1 foot long.

QuickReview

Example 3

Determine whether the dilation from A to B is an *enlargement* or a *reduction*. Then find the scale factor of the dilation.
B is larger than A, so it is an enlargement.

The distance between the vertices of **A** is **2** and the corresponding distance for **B** is **6**.

The scale factor is $\frac{6}{2}$ or 3.

2 Online Option Take an online self-check Chapter Readiness Quiz at connectED.mcgraw-hill.com.

Get Started on the Chapter

You will learn several new concepts, skills, and vocabulary terms as you study Chapter 9. To get ready, identify important terms and organize your resources. You may refer to Chapter 0 to review prerequisite skills.

FOLDABLES StudyOrganizer

Transformations and Symmetry Make this Foldable to help you organize your Chapter 9 notes about transformations and symmetry. Begin with three sheets of notebook paper.
1 **Fold** each sheet of paper in half.

2 **Open** the folded papers and fold each paper lengthwise two inches, to form a pocket.

3 **Glue** the sheets side-by-side to create a booklet.

4 **Label** each of the pockets as shown.

line of symmetry	p. 653	eje de símetria

ReviewVocabulary

reflection p. 294 **reflexión** a transformation representing a flip of the figure over a point, line or plane

rotation p. 294 **rotación** a transformation that turns every point of a preimage through a specified angle and direction about a fixed point

translation p. 294 **translación** a transformation that moves all points of a figure the same distance in the same direction

The transformation from A to B is a rotation.

The transformation from A to C is a reflection.

The transformation from A to D is a translation.

Reflections

Now

1 Draw reflections.

2 Draw reflections in the coordinate plane.

Why?

- Notice in this water reflection that the distance a point lies above the water line appears the same as the distance its image lies below the water.

NewVocabulary
line of reflection

1 Draw Reflections In Lesson 4-7, you learned that a reflection or *flip* is a transformation in a line called the **line of reflection**. Each point of the preimage and its corresponding point on the image are the same distance from this line.

KeyConcept Reflection in a Line

A reflection in a line maps a point to its image such that

- if the point is on the line, then the image and preimage are the same point, or
- if the point does not lie on the line, the line is the perpendicular bisector of the segment joining the two points.

A is on line *k*.   *A* is not on line *k*.
*A'*, *A''*, *A'''*, and so on, name corresponding points for one or more transformations.

To reflect a polygon in a line, reflect each of the polygon's vertices. Then connect these vertices to form the reflected image.

Example 1 Reflect a Figure in a Line

Copy the figure and the given line of reflection. Then draw the reflected image in this line using a ruler.

Step 1 Draw a line through each vertex that is perpendicular to line *k*.

Step 2 Measure the distance from point *A* to line *k*. Then locate *A'* the same distance from line *k* on the opposite side

Step 3 Repeat Step 2 to locate points *B'* and *C'*. Then connect vertices *A'*, *B'*, and *C'* to form the reflected image.

GuidedPractice

1A.

1B.

1C.
Recall that a reflection is a *congruence transformation* or *isometry*. In the figure in Example 1, $\triangle ABC \cong \triangle A'B'C'$.

### 🌐 Real-World Example 2 Minimize Distance by Using a Reflection

SHOPPING Suppose you are going to buy clothes in Store B, return to your car, and then buy shoes at Store G. Where along line *s* of parking spaces should you park to minimize the distance you will walk?

Understand You are asked to locate a point *P* on line *s* such that $BP + PG$ has the least possible value.

Plan The total distance from *B* to *P* and then from *P* to *G* is least when these three points are collinear. Use the reflection of point *B* in line *s* to find the location for point *P*.

Solve Draw $\overline{B'G}$. Locate *P* at the intersection of line *s* and $\overline{B'G}$.

Check Compare the sum $BP + PG$ for each case to verify that the location found for *P* minimizes this sum.
▶ **Guided**Practice

2. TICKET SALES Joy wants to select a good location to sell tickets for a dance. Locate point *P* such that the distance someone would have to walk from Hallway *A*, to point *P* on the wall, and then to their next class in Hallway *B* is minimized.
2 Draw Reflections in the Coordinate Plane Reflections can also be performed in the coordinate plane by using the techniques presented in Example 3.
Example 3 Reflect a Figure in a Horizontal or Vertical Line

Triangle *JKL* has vertices *J*(0, 3), *K*(−2, −1), and *L*(−6, 1). Graph $\triangle JKL$ and its image in the given line.
a. $x = -4$

Find a corresponding point for each vertex so that a vertex and its image are equidistant from the line $x = -4$.

b. $y = 2$

Find a corresponding point for each vertex so that a vertex and its image are equidistant from the line $y = 2$.

Trapezoid *RSTV* has vertices *R*(−1, 1), *S*(4, 1), *T*(4, −1), and *V*(−1, −3). Graph trapezoid *RSTV* and its image in the given line.

3A. $y = -3$ **3B.** $x = 2$

When the line of reflection is the *x*- or *y*-axis, you can use the following rule.

KeyConcept   Reflection in the *x*- or *y*-axis

	Reflection in the *x*-axis		Reflection in the *y*-axis
Words	To reflect a point in the *x*-axis, multiply its *y*-coordinate by −1.	**Words**	To reflect a point in the *y*-axis, multiply its *x*-coordinate by −1.
Symbols	$(x, y) \rightarrow (x, -y)$	**Symbols**	$(x, y) \rightarrow (-x, y)$
Example		**Example**	

ReadingMath

Coordinate Function Notation
The expression $P(a, b) \rightarrow P'(a, -b)$ can be read as *point P with coordinates a and b is mapped to new location P prime with coordinates a and negative b.*

Example 4   Reflect a Figure in the *x*- or *y*-axis

Graph each figure and its image under the given reflection.

a. $\triangle ABC$ with vertices $A(-5, 3)$, $B(2, 0)$, and $C(1, 2)$ in the *x*-axis

Multiply the *y*-coordinate of each vertex by −1.

$(x, y) \quad \rightarrow \quad (x, -y)$

$A(-5, 3) \quad \rightarrow \quad A'(-5, -3)$

$B(2, 0) \quad \rightarrow \quad B'(2, 0)$

$C(1, 2) \quad \rightarrow \quad C'(1, -2)$

StudyTip

Invariant Points In Example 4a, point *B* is called an *invariant point* because it maps onto itself. Only points that lie on the line of reflection are invariant under a reflection.
b. parallelogram *PQRS* with vertices $P(-4, 1)$, $Q(2, 3)$, $R(2, -1)$, and $S(-4, -3)$ in the *y*-axis

Multiply the *x*-coordinate of each vertex by −1.

$(x, y) \quad \rightarrow \quad (-x, y)$

$P(-4, 1) \quad \rightarrow \quad P'(4, 1)$

$Q(2, 3) \quad \rightarrow \quad Q'(-2, 3)$

$R(2, -1) \quad \rightarrow \quad R'(-2, -1)$

$S(-4, -3) \quad \rightarrow \quad S'(4, -3)$

▶ **Guided**Practice

4A. rectangle with vertices $E(-4, -1)$, $F(2, 2)$, $G(3, 0)$, $H(-3, -3)$ in the *x*-axis

**4B.** $\triangle JKL$ with vertices $J(3, 2)$, $K(2, -2)$, $L(4, -5)$ in the *y*-axis

You can also reflect an image in the line $y = x$.

The slope of $y = x$ is 1. In the graph shown, $\overline{CC'}$ is perpendicular to $y = x$, so its slope is −1. From $C(-3, 2)$, move right 2.5 units and down 2.5 units to reach $y = x$. From this point on $y = x$, move right 2.5 units and down 2.5 units to locate $C'(2, -3)$. Using a similar method, the image of $D(-3, -1)$ is found to be $D'(-1, -3)$.
Comparing the coordinates of these and other examples leads to the following rule for reflections in the line $y = x$.

KeyConcept Reflection in Line $y = x$

| Words | To reflect a point in the line $y = x$, interchange the x- and y-coordinates. |
| Symbols | $(x, y) \rightarrow (y, x)$ |

Example

$B(-1, 4)$
$A(-5, 2)$
$y = x$
$B'(4, -1)$
$A'(2, -5)$

Example 5 Reflect a Figure in the Line $y = x$

Quadrilateral *JKLM* has vertices $J(2, 2)$, $K(4, 1)$, $L(3, -3)$, and $M(0, -4)$. Graph *JKLM* and its image *J'K'L'M'* in the line $y = x$.

Interchange the x- and y-coordinates of each vertex.

| (x, y)	$\rightarrow$	(y, x)
$J(2, 2)$	$\rightarrow$	$J'(2, 2)$
$K(4, 1)$	$\rightarrow$	$K'(1, 4)$
$L(3, -3)$	$\rightarrow$	$L'(-3, 3)$
$M(0, -4)$	$\rightarrow$	$M'(-4, 0)$

GuidedPractice

5. △*BCD* has vertices $B(-3, 3)$, $C(1, 4)$, and $D(-2, -4)$. Graph △*BCD* and its image in the line $y = x$.

ConceptSummary Reflection in the Coordinate Plane
Reflection in the x-axis	Reflection in the y-axis	Reflection in the line $y = x$
$P(x, y)$ $P'(x, -y)$	$P(x, y)$ $P'(-x, y)$	$P(x, y)$ $y = x$ $P'(y, x)$

Example 2

SPORTS When a ball is rolled or struck without spin against a wall, it bounces off the wall and travels in a ray that is the reflected image of the path of the ball if it had gone straight through the wall. Use this information in Exercises 16 and 17.

Wall
16. **BILLIARDS** Tadeo is playing billiards. He wants to strike the eight ball with the cue ball so that the eight ball bounces off the rail and rolls into the indicated pocket. If the eight ball moves with no spin, draw a diagram showing the exact point *P* along the right rail where the eight ball should hit after being struck by the cue ball.

cue ball
eight ball
17. **INDOOR SOCCER** Abby is playing indoor soccer, and she wants to hit the ball to point *C*, but must avoid an opposing player at point *B*. She decides to hit the ball at point *A* so that it bounces off the side wall. Draw a diagram that shows the exact point along the top wall for which Abby should aim.

Example 3   Graph each figure and its image in the given line.
18. $\triangle ABC$; $y = 3$

19. $\triangle ABC$; $x = -1$

20. $JKLM$; $x = 1$

21. $JKLM$; $y = 4$
22. $WXYZ$; $y = -4$

23. $WXYZ$; $x = -2$

Examples 4–5 Graph each figure and its image under the given reflection.

24. rectangle $ABCD$ with vertices $A(-5, 2)$, $B(1, 2)$, $C(1, -1)$, and $D(-5, -1)$ in the line $y = -2$

25. square $JKLM$ with vertices $J(-4, 6)$, $K(0, 6)$, $L(0, 2)$, and $M(-4, 2)$ in the y-axis

26. $\triangle FGH$ with vertices $F(-3, 2)$, $G(-4, -1)$, and $H(-6, -1)$ in the line $y = x$

27. $\square WXYZ$ with vertices $W(2, 3)$, $X(7, 3)$, $Y(6, -1)$, and $Z(1, -1)$ in the x-axis

28. trapezoid $PQRS$ with vertices $P(-1, 4)$, $Q(2, 4)$, $R(1, -1)$, and $S(-1, -1)$ in the y-axis

29. $\triangle STU$ with vertices $S(-3, -2)$, $T(-2, 3)$, and $U(2, 2)$ in the line $y = x$

Each figure shows a preimage and its reflected image in some line. Copy each figure and draw the line of reflection.

30.

31.

32.

CONSTRUCTION To construct the reflection of a figure in a line using only a compass and a straightedge, you can use:

- the construction of a line perpendicular to a given line through a point not on the line (p. 55), and

- the construction of a segment congruent to a given segment (p. 17).

P P'

Tennessee Curriculum Standards

CLE 3108.3.2 Explore the effect of transformations on geometric figures and shapes in the coordinate plane.

SPI 3108.3.3 Describe algebraically the effect of a single transformation on two-dimensional geometric shapes in the coordinate plane.

CLE 3108.4.7 Apply the major concepts of transformation geometry to analyzing geometric objects and symmetry. *Also addresses* ✓3108.3.5, ✓3108.3.6, ✓3108.4.31, ✓3108.4.34, *and SPI 3108.4.10.*

1 **Draw Translations** In Lesson 4-7, you learned that a translation or *slide* is a transformation that moves all points of a figure the same distance in the same direction. Since vectors can be used to describe both distance and direction, vectors can be used to define translations.

KeyConcept Translation

A translation maps each point to its image along a vector, called the **translation vector**, such that

- each segment joining a point and its image has the same length as the vector, and
- this segment is also parallel to the vector.

Point A' is a translation of point A along translation vector $\vec{k}$.
Example 1 Draw a Translation

Copy the figure and the given translation vector. Then draw the translation of the figure along the translation vector.

**Step 1** Draw a line through each vertex parallel to vector $\vec{w}$.

Step 2 Measure the length of vector $\vec{w}$. Locate point X' by marking off this distance along the line through vertex X, starting at X and in the same direction as the vector.

Step 3 Repeat Step 2 to locate points Y' and Z'. Then connect vertices X', Y', and Z' to form the translated image.

▶ **GuidedPractice**

1A.

1B.
2 Draw Translations in the Coordinate Plane

Recall that a vector in the coordinate plane can be written as $\langle a, b \rangle$, where a represents the horizontal change and b is the vertical change from the vector's tip to its tail. $\overrightarrow{CD}$ is represented by the ordered pair $\langle 2, -4 \rangle$.
Written in this form, called the component form, a vector can be used to translate a figure in the coordinate plane.

ReadingMath

**Horizontal and Vertical Translations** When the translation vector is of the form $\langle a, 0 \rangle$, the translation is horizontal only. When the translation vector is of the form $\langle 0, b \rangle$, the translation is vertical only.

KeyConcept Translation in the Coordinate Plane

Words To translate a point along vector $\langle a, b \rangle$, add a to the x-coordinate and b to the y-coordinate.

Symbols $(x, y) \rightarrow (x + a, y + b)$

Example The image of $P(-2, 3)$ translated along vector $\langle 7, 4 \rangle$ is $P'(5, 7)$.
A translation is another type of congruence transformation or isometry.

Example 2 Translations in the Coordinate Plane

Graph each figure and its image along the given vector.

**a.** $\triangle EFG$ with vertices $E(-7, -1)$, $F(-4, -4)$, and $G(-3, -1)$; $\langle 2, 5 \rangle$

The vector indicates a translation 2 units right and 5 units up.

$(x, y) \rightarrow (x + 2, y + 5)$

$E(-7, -1) \rightarrow E'(-5, 4)$

$F(-4, -4) \rightarrow F'(-2, 1)$

$G(-3, -1) \rightarrow G'(-1, 4)$

b. square $JKLM$ with vertices $J(3, 4)$, $K(5, 2)$, $L(7, 4)$, and $M(5, 6)$; $\langle -3, -4 \rangle$

The vector indicates a translation 3 units left and 4 units down.

$(x, y) \rightarrow (x + (-3), y + (-4))$

$J(3, 4) \rightarrow J'(0, 0)$

$K(5, 2) \rightarrow K'(2, -2)$

$L(7, 4) \rightarrow L'(4, 0)$

$M(5, 6) \rightarrow M'(2, 2)$

Math HistoryLink

Felix Klein (1849–1925) Klein's definition of geometry as the study of the properties of a space that remain invariant under a group of transformations allowed for the inclusion of both Euclidean and non-Euclidean geometry.

GuidedPractice

2A. $\triangle ABC$ with vertices $A(2, 6)$, $B(1, 1)$, $C(7, 5)$; $\langle -4, -1 \rangle$

2B. quadrilateral $QRST$ with vertices $Q(-8, -2)$, $R(-9, -5)$, $S(-4, -7)$, $T(-4, -2)$; $\langle 7, 1 \rangle$

🌐 Real-World Example 3 Describing Translations

MARCHING BAND In one part of a marching band's performance, a line of trumpet players starts at position 1, marches to position 2, and then to position 3. Each unit on the graph represents one step.

Real-World Link

Marching bands often make use of a series of formations that can include geometric shapes. Usually, each band member has an assigned position in each formation. *Floating* is the movement of a group of members together without changing the shape or size of their formation.
a. Describe the translation of the trumpet line from position 1 to position 2 in function notation and in words.

One point on the line in position 1 is **(14, 8)**. In position 2, this point moves to **(2, 8)**. Use the translations function $(x, y) \rightarrow (x + a, y + b)$ to write and solve equations to find a and b.

$(14 + a, 8 + b)$ or **(2, 8)**

$14 + a = 2$ $8 + b = 8$

$a = -12$ $b = 0$

function notation: $(x, y) \rightarrow (x + (-12), y + 0)$

So, the trumpet line is translated 12 steps *left* but no steps forward or backward from position 1 to position 2.

b. Describe the translation of the line from position 1 to position 3 using a translation vector.

$(14 + a, 8 + b)$ or **(2, −1)**

$14 + a = 2$ $8 + b = -1$

$a = -12$ $b = -9$

translation vector: $\langle -12, -9 \rangle$

▶ **Guided**Practice

**3. ANIMATION** A coin is filmed using stop-motion animation so that it appears to move.

A. Describe the translation from A to B in function notation and in words.

B. Describe the translation from A to C using a translation vector.
Example 1 Copy the figure and the given translation vector. Then draw the translation of the figure along the translation vector.

1.

13.
Example 2 Graph each figure and its image along the given vector.

14. $\triangle ABC$ with vertices $A(1, 6)$, $B(3, 2)$, and $C(4, 7)$; $\langle 4, -1 \rangle$

15 $\triangle MNP$ with vertices $M(4, -5)$, $N(5, -8)$, and $P(8, -6)$; $\langle -2, 5 \rangle$

16. rectangle $QRST$ with vertices $Q(-8, 4)$, $R(-8, 2)$, $S(-3, 2)$, and $T(-3, 4)$; $\langle 2, 3 \rangle$

17. quadrilateral $FGHJ$ with vertices $F(-4, -2)$, $G(-1, -1)$, $H(0, -4)$, and $J(-3, -6)$; $\langle -5, -2 \rangle$

18. $\square WXYZ$ with vertices $W(-3, -1)$, $X(1, -1)$, $Y(2, -4)$, and $Z(-2, -4)$; $\langle -3, 4 \rangle$

19. trapezoid $JKLM$ with vertices $J(-4, -2)$, $K(-1, -2)$, $L(0, -5)$, and $M(-5, -5)$; $\langle 6, 5 \rangle$

Example 3

20. LOCATION Brittany's neighborhood is shown on the grid at the right.

  a. If she leaves home and travels 4 blocks north and 3 blocks east, what is her new location?

  b. Use words to describe two possible translations that will take Brittany home from school.
21 FOOTBALL A wide receiver starts from the 15-yard line on the right hash mark and runs a route that takes him 12 yards to the left and down field for a gain of 17 yards. Write a translation vector to describe the receiver's route.
22. CHESS Each chess piece has a path that it can follow to move. The rook, which begins in square a8, can only move vertically or horizontally. The knight, which begins in square b8, can move two squares horizontally and then one square vertically, or two squares vertically and one square horizontally. The bishop, which begins in square f8, can only move diagonally.

  a. The knight moves 2 squares vertically and 1 square horizontally on its first move, then two squares horizontally and 1 square vertically on its second move. What are the possible locations for the knight after two moves?

  b. After two moves, the rook is in square d3. Describe a possible translation to describe the two moves.

  c. Describe a translation that can take the bishop to square a1. What is the minimum number of moves that can be used to accomplish this translation?
Write each translation vector.

23.

24.
25. CONCERTS Dexter's family buys tickets every year for a concert. Last year they were in seats C3, C4, C5, and C6. This year, they will be in seats D16, D17, D18, and D19. Write a translation in words and using vector notation that can be used to describe the change in their seating.
ALGEBRA Graph the translation of each function along the given vector. Then write the equation of the translated image.

26. $\langle 4, 1 \rangle$

$y = x^2$

**27.** $\langle -2, 0 \rangle$

$y = -x^3$

28. ROLLER COASTERS The length of the roller coaster track from the top of a hill to the bottom of the hill is 125 feet at a 53° angle with the vertical. If the position at the top of the hill is (x, y), use function notation to describe the translation to the bottom of the hill. Round to the nearest foot.

29. MULTIPLE REPRESENTATIONS In this problem, you will investigate reflections over a pair of parallel lines.

a. **Geometric** On patty paper, draw $\triangle ABC$ and a pair of vertical lines ℓ and m. Reflect $\triangle ABC$ in line ℓ by folding the patty paper. Then reflect $\triangle A'B'C'$, in line m. Label the final image $\triangle A''B''C''$.
b. **Geometric** Repeat the process in part **a** for $\triangle DEF$ reflected in vertical lines n and p and $\triangle MNP$ reflected in vertical lines q and r.

c. **Tabular** Copy and complete the table below.

Distance Between Corresponding Points (cm)		Distance Between Vertical Lines (cm)	
A and A'', B and B'', C and C''		ℓ and m	
D and D'', E and E'', F and F''		n and p	
M and M'', N and N'', P and P''		q and r	

d. **Verbal** Describe the result of two reflections in two vertical lines using one transformation.

H.O.T. Problems   Use Higher-Order Thinking Skills

30. REASONING Determine a rule to find the final image of a point that is translated along $\langle x + a, y + b \rangle$ and then $\langle x + c, y + d \rangle$.

31. CHALLENGE A line $y = mx + b$ is translated using the vector $\langle a, b \rangle$. Write the equation of the translated line. What is the value of the y-intercept?

32. OPEN ENDED Draw a figure on the coordinate plane so that the figure has the same orientation after it is reflected in the line $y = 1$. Explain what must be true in order for this to occur.

33. WRITING IN MATH Compare and contrast function notation and vector notation for translations.

34. WRITING IN MATH Recall from Lesson 9-1 that an invariant point maps onto itself. Can invariant points occur with translations? Explain why or why not.

Standardized Test Practice

35. Identify the location of point P under translation $(x + 3, y + 1)$.
  A $(0, 6)$ **C** $(2, -4)$

  B $(0, 3)$ **D** $(2, 4)$

36. SHORT RESPONSE Which vector best describes the translation of $A(3, -5)$ to $A'(-2, -8)$?

37. ALGEBRA Over the next four days, Amanda plans to drive 160 miles, 235 miles, 185 miles, and 220 miles. If her car gets an average of 32 miles per gallon of gas, how many gallons of gas should she expect to use in all?

  F 25   **G** 30   **H** 35   **J** 40

38. SAT/ACT A bag contains 5 red marbles, 2 blue marbles, 4 white marbles, and 1 yellow marble. If two marbles are chosen in a row, without replacement, what is the probability of getting 2 white marbles?

  A $\dfrac{1}{66}$ **C** $\dfrac{1}{9}$ **E** $\dfrac{2}{5}$

 **B** $\dfrac{1}{11}$ **D** $\dfrac{5}{33}$

Spiral Review

Graph each figure and its image under the given reflection. (Lesson 9-1)
39. $\overline{DJ}$ with endpoints $D(4, 4)$, $J(-3, 2)$ in the y-axis

40. $\triangle XYZ$ with vertices $X(0, 0)$, $Y(3, 0)$, and $Z(0, 3)$ in the x-axis

41. $\triangle ABC$ with vertices $A(-3, -1)$, $B(0, 2)$, and $C(3, -2)$, in the line $y = x$

42. quadrilateral $JKLM$ with vertices $J(-2, 2)$, $K(3, 1)$, $L(4, -1)$, and $M(-2, -2)$ in the origin

**Copy the vectors to find each sum or difference.** (Lesson 8-7)

**43.** $\vec{c} - \vec{d}$ **44.** $\vec{w} + \vec{x}$ **45.** $\vec{n} - \vec{p}$

46. NAVIGATION An airplane is three miles above sea level when it begins to climb at a 3.5° angle. If this angle is constant, how far above sea level is the airplane after flying 50 miles? (Lesson 8-4)

**Use $\square JKLM$ to find each measure.** (Lesson 6-2)

47. $m\angle MJK$ **48.** $m\angle JML$

49. $m\angle JKL$ **50.** $m\angle KJL$

Skills Review

Copy the diagram shown, and extend each ray. Classify each angle as *right*, *acute*, or *obtuse*. Then use a protractor to measure the angle to the nearest degree. (Lesson 1-4)

51. $\angle AMC$ **52.** $\angle FMD$

53. $\angle BMD$ **54.** $\angle CMB$

In Chapter 4, you learned that a rotation is a type of transformation that moves a figure about a fixed point, or center of rotation, through a specific angle and in a specific direction. In this activity you will use patty paper to explore the properties of rotations.

Activity   Explore Rotations by Using Patty Paper

Step 1   On a piece of patty paper, draw quadrilateral *ABCD* and a point *P*.

Step 2   On another piece of patty paper, trace quadrilateral *ABCD* and point *P*. Label the new quadrilateral *A'B'C'D'* and the new point *P*.

Step 3   Position the patty paper so that both points *P* coincide. Rotate the paper so that *ABCD* and *A'B'C'D'* do not overlap. Tape the two pieces of patty paper together.

Step 1

Step 4   Measure the distance between *A*, *B*, *C*, and *D* to point *P*. Repeat for quadrilateral *A'B'C'D'*. Then copy and complete the table below.

Steps 2 and 3

Quadrilateral	Length			
ABCD	AP	BP	CP	DP
A'B'C'D'	A'P	B'P	C'P	D'P

Exercises

1. Graph △*JKL* with vertices *J*(1, 3), *K*(2, 1), and *L*(3, 4) on a coordinate plane, and then trace on patty paper.

   a. Use a protractor to rotate each vertex 90° clockwise about the origin as shown in the figure at the right. What are the vertices of the rotated image?

   b. Rotate △*JKL* 180° about the origin. What are the vertices of the rotated image?

   c. Use the Distance Formula to find the distance from points *J*, *K*, and *L* to the origin. Repeat for *J'K'L'* and *J"K"L"*.

2. **WRITING IN MATH** If you rotate point (4, 2) 90° and 180° about the origin, how do the *x*- and *y*-coordinates change?

3. **MAKE A PREDICTION** What are the new coordinates of a point (*x*, *y*) that is rotated 270°?

4. **MAKE A CONJECTURE** Make a conjecture about the distances from the center of rotation *P* to each corresponding vertex of *ABCD* and *A'B'C'D'*.

Rotations

**New**Vocabulary
center of rotation
angle of rotation

1 **Draw Rotations** In Lesson 4-7, you learned that a rotation or *turn* moves every point of a preimage through a specified angle and direction about a fixed point.

KeyConcept **Rotation**

A rotation about a fixed point, called the **center of rotation**, through an angle of $x°$ maps a point to its image such that

- if the point is the center of rotation, then the image and preimage are the same point, or
- if the point is not the center of rotation, then the image and preimage are the same distance from the center of rotation and the measure of the **angle of rotation** formed by the preimage, center of rotation, and image points is x.

A' is the image of A after a 120° rotation about point C.
The direction of a rotation can be either clockwise or counterclockwise. Assume that all rotations are counterclockwise unless stated otherwise.
clockwise   **counterclockwise**

Example 1 **Draw a Rotation**

Copy △*ABC* and point *K*. Then use a protractor and ruler to draw a 140° rotation of △*ABC* about point *K*.
Step 1 Draw a segment from *A* to *K*.
Step 2 Draw a 140° angle using $\overline{KA}$.

**Step 3** Use a ruler to draw *A'* such that *KA'* = *KA*.

Step 4 Repeat Steps 1–3 for vertices *B* and *C* and draw △*A'B'C'*.

Copy each figure and point *K*. Then use a protractor and ruler to draw a rotation of the figure the given number of degrees about *K*.

1A. 65°

1B. 170°

2 **Draw Rotations in the Coordinate Plane** When a point is rotated 90°, 180°, or 270° counterclockwise about the origin, you can use the following rules.
KeyConcept Rotations in the Coordinate Plane

|	
90° Rotation To rotate a point 90° counterclockwise about the origin, multiply the *y*-coordinate by −1 and then interchange the *x*- and *y*-coordinates. Symbols $(x, y) \rightarrow (-y, x)$	**Example** $P'(-2, 5)$ $P(5, 2)$ 90°
180° Rotation To rotate a point 180° counterclockwise about the origin, multiply the *x*- and *y*-coordinates by −1. Symbols $(x, y) \rightarrow (-x, -y)$	**Example** $P(5, 2)$ 180° $P'(-5, -2)$
270° Rotation To rotate a point 270° counterclockwise about the origin, multiply the *x*-coordinate by −1 and then interchange the *x*- and *y*-coordinates. Symbols $(x, y) \rightarrow (y, -x)$	**Example** $P(5, 2)$ 270° $P'(2, -5)$
Example 2 Rotations in the Coordinate Plane

Triangle *PQR* has vertices *P*(1, 1), *Q*(4, 5), and *R*(5, 1). Graph △*PQR* and its image after a rotation 90° about the origin.

Multiply the *y*-coordinate of each vertex by −1 and interchange.
$(x, y) \rightarrow (-y, x)$

$P(1, 1) \rightarrow P'(-1, 1)$

$Q(4, 5) \rightarrow Q'(-5, 4)$

$R(5, 1) \rightarrow R'(-1, 5)$

Graph △*PQR* and its image △*P'Q'R'*.

▶ **Guided**Practice

2. Parallelogram *FGHJ* has vertices *F*(2, 1), *G*(7, 1), *H*(6, −3), and *J*(1, −3). Graph *FGHJ* and its image after a rotation 180° about the origin.

Test Example 3

Triangle JKL is shown at the right. What is the image of point J after a rotation 270° counterclockwise about the origin?

A $(-3, -7)$

B $(-7, 3)$

C $(-7, -3)$

D $(7, -3)$

Read the Test Item

You are given that $\triangle JKL$ has coordinates $J(3, -7)$, $K(1, -1)$, and $L(5, -3)$ and are then asked to identify the coordinates of the image of point J after a 270° counterclockwise rotation about the origin.

StudyTip

270° Rotation You can complete a 270° rotation by performing a 90° rotation and a 180° rotation in sequence.

Solve the Test Item

To find the coordinates of point J after a 270° counterclockwise rotation about the origin, multiply the x-coordinate by -1 and then interchange the x- and y-coordinates.

$$(x, y) \rightarrow (y, -x) \qquad (3, -7) \rightarrow (-7, -3)$$

The answer is choice C.

GuidedPractice

3. Parallelogram $WXYZ$ is rotated 180° counterclockwise about the origin. Which of these graphs represents the resulting image?
Test-TakingTip

Solve a Simpler Problem Instead of checking all four vertices of parallelogram $WXYZ$ in each graph, check just one vertex, such as X.

F $W(3, 6)$, $X(-3, 5)$, $Y(-3, 1)$, $Z(3, 2)$

H $Y(1, 3)$, $X(5, 3)$, $Z(2, -3)$, $W(6, -3)$

G $Y(1, 3)$, $X(5, 3)$, $Z(2, -3)$, $W(6, -3)$

J $X(3, 2)$, $W(-3, 1)$, $Z(-3, -3)$, $Y(3, -2)$

Examples 2–3 Graph each figure and its image after the specified rotation about the origin.

14. $\triangle JKL$ has vertices $J(2, 6)$, $K(5, 2)$, and $L(7, 5)$; 90°

15. rhombus $WXYZ$ has vertices $W(-3, 4)$, $X(0, 7)$, $Y(3, 4)$, and $Z(0, 1)$; 90°

16. $\triangle FGH$ has vertices $F(2, 4)$, $G(5, 6)$, and $H(7, 2)$; 180°

17. trapezoid $ABCD$ has vertices $A(-7, -2)$, $B(-6, -6)$, $C(-1, -1)$, and $D(-5, 0)$; 180°

18. $\triangle RST$ has vertices $R(-6, -1)$, $S(-4, -5)$, and $T(-2, -1)$; 270°

19. parallelogram $MPQV$ has vertices $M(-6, 3)$, $P(-2, 3)$, $Q(-3, -2)$, and $V(-7, -2)$; 270°

20. **WEATHER** A weathervane is used to indicate the direction of the wind. If the vane is pointing northeast and rotates 270°, what is the new wind direction?

21. **PHOTOGRAPHY** The photograph of the Grande Roue, or Big Wheel, at the right appears blurred because of the camera's shutter speed—the length of time the camera's shutter was open. The diameter of the wheel is 60 meters.

   a. Estimate the angle of rotation in the photo. (*Hint:* Use points A and A'.)

   **b.** If the Ferris wheel makes one revolution per minute, use your estimate from part **a** to estimate the camera's shutter speed.

Each figure shows a preimage and its image after a rotation about point P. Copy each figure, locate point P, and find the angle of rotation.

22.

23.
ALGEBRA Give the equation of the line $y = -x - 2$ after a rotation about the origin through the given angle. Then describe the relationship between the equations of the image and preimage.
24. 90°

25. 180°

26. 270°

27. 360°

ALGEBRA Rotate the line the specified number of degrees about the x- and y-intercepts and find the equation of the resulting image.

28. $y = x - 5$; 90°

29. $y = 2x + 4$; 180°

30. $y = 3x - 2$; 270°

31. **RIDES** An amusement park ride consists of four circular cars. The ride rotates at a rate of 0.25 revolution per second. In addition, each car rotates 0.5 revolution per second. If Jane is positioned at point P when the ride begins, what coordinates describe her position after 31 seconds?
32. BICYCLE RACING Brandon and Nestor are participating in a bicycle race on a circular track with a radius of 200 feet.
a. If the race starts at (200, 0) and both complete one rotation in 30 seconds, what are their coordinates after 5 seconds?

b. Suppose the length of race is 50 laps and Brandon continues the race at the same rate. If Nestor finishes in 26.2 minutes, who is the winner?

33. MULTIPLE REPRESENTATIONS In this problem, you will investigate reflections over a pair of intersecting lines.

a. Geometric On a coordinate plane, draw a triangle and a pair of intersecting lines. Label the triangle ABC and the lines ℓ and m. Reflect $\triangle ABC$ in the line ℓ. Then reflect $\triangle A'B'C'$ in the line m. Label the final image $A''B''C''$.

b. Geometric Repeat the process in part a two more times in two different quadrants. Label the second triangle DEF and reflect it in intersecting lines n and p. Label the third triangle MNP and reflect it in intersecting lines q and r.

c. Tabular Measure the angle of rotation of each triangle about the point of intersection of the two lines. Copy and complete the table below.

| Angle of Rotation Between Figures		Angle Between Intersecting Lines	
$\triangle ABC$ and $\triangle A''B''C''$		ℓ and m	
$\triangle DEF$ and $\triangle D''E''F''$		n and p	
$\triangle MNP$ and $\triangle M''N''P''$		q and r	

d. Verbal Make a conjecture about the angle of rotation of a figure about the intersection of two lines after the figure is reflected in both lines.

H.O.T. Problems   Use Higher-Order Thinking Skills

34. WRITING IN MATH Are collinearity and betweenness of points maintained under rotation? Explain.

35. CHALLENGE Point C has coordinates $C(5, 5)$. The image of this point after a rotation of $100°$ about a certain point is $C'(-5, 7.5)$. Find the coordinates of the center of this rotation. Explain.

36. OPEN ENDED Draw a figure on the coordinate plane. Describe a nonzero rotation that maps the image onto the preimage with no change in orientation.

37. REASONING Is the reflection of a figure in the x-axis equivalent to the rotation of that same figure $180°$ about the origin? Explain.

38. WRITING IN MATH Do invariant points *sometimes*, *always*, or *never* occur in a rotation? Explain your reasoning.

Standardized Test Practice

39. What rotation of trapezoid *QRST* creates an image with point *R'* at (4, 3)?
A 270° counterclockwise about point *T*

B 185° counterclockwise about point *T*

C 180° clockwise about the origin

D 90° clockwise about the origin

40. SHORT RESPONSE △*XYZ* has vertices *X*(1, 7), *Y*(0, 2), and *Z*(−5, −2). What are the coordinates of *X'* after a rotation 270° counterclockwise about the origin?

41. ALGEBRA The population of the United States in July of 2007 was estimated to have surpassed 301,000,000. At the same time the world population was estimated to be over 6,602,000,000. What percent of the world population, to the nearest tenth, lived in the United States at this time?

F 3.1%   **H** 4.2%

G 3.5%   **J** 4.6%

42. SAT/ACT An 18-foot ladder is placed against the side of a house. The base of the ladder is positioned 8 feet from the house. How high up on the side of the house, to the nearest tenth of a foot, does the ladder reach?

A 10.0 ft   **D** 22.5 ft

B 16.1 ft   **E** 26.0 ft

C 19.7 ft

Geometry Software Lab
Compositions of Transformations

In this lab, you will use Geometer's Sketchpad to explore the effects of performing multiple transformations on a figure.

Activity

Reflect a figure in two vertical lines.

Step 1 Use the line segment tool to construct a triangle with one vertex pointing to the left so that you can easily see changes as you perform transformations. Label the triangle *ABC*.

Step 2 Insert and label a line *m* to the right of △*ABC*. Insert a point so that the distance from the point to line *m* is greater than the width of △*ABC*. Draw the line parallel to line *m* through the point and label the new line *r*.

Step 3 Select line *m* and choose **Mark Mirror** from the **Transform** menu. Select all sides and vertices of △*ABC* and choose **Reflect** from the **Transform** menu.

Step 4 Repeat the process you used in Step 3 to reflect the new image in line *r*.

Steps 1–3
Step 4

Analyze the Results

1. How are the original figure and the final figure related?

2. What single transformation could be used to produce the final figure?
3. If you move line *m*, what happens? if you move line *r*?

4. **MAKE A CONJECTURE** If you reflected the figure in a third line, what single transformation do you think could be used to produce the final figure? Explain your reasoning.

5. Repeat the activity for a pair of perpendicular lines. What single transformation could be used to produce the same final figure?

6. **MAKE A CONJECTURE** If you reflected the figure from Exercise 5 in a third line perpendicular to the second line, what single transformation do you think could be used to produce the final figure? Explain your reasoning.

Compositions of Transformations

- You drew reflections, translations, and rotations. (Lessons 9-1, 9-2, and 9-3)

1 Draw glide reflections and other compositions of isometries in the coordinate plane.

2 Draw compositions of reflections in parallel and intersecting lines.

- The pattern of footprints left in the sand after a person walks along the edge of a beach illustrates the composition of two different transformations—translations and reflections.

NewVocabulary
composition of transformations
glide reflection

1 Glide Reflections When a transformation is applied to a figure and then another transformation is applied to its image, the result is called a **composition of transformations**. A glide reflection is one type of composition of transformations.

KeyConcept Glide Reflection

A **glide reflection** is the composition of a translation followed by a reflection in a line parallel to the translation vector.

Example
The glide reflection shown is the composition of a translation along $\vec{\mathbf{w}}$ followed by a reflection in line ℓ.
Example 1 Graph a Glide Reflection

Triangle JKL has vertices $J(6, -1)$, $K(10, -2)$, and $L(5, -3)$. Graph $\triangle JKL$ and its image after a translation along $\langle 0, 4 \rangle$ and a reflection in the y-axis.

Step 1 translation along $\langle 0, 4 \rangle$

$(x, y) \quad \rightarrow \quad (x, y + 4)$
$J(6, -1) \quad \rightarrow \quad J'(6, 3)$
$K(10, -2) \quad \rightarrow \quad K'(10, 2)$
$L(5, -3) \quad \rightarrow \quad L'(5, 1)$

Step 2 reflection in the y-axis

$(x, y) \quad \rightarrow \quad (-x, y)$
$J'(6, 3) \quad \rightarrow \quad J''(-6, 3)$
$K'(10, 2) \quad \rightarrow \quad K''(-10, 2)$
$L'(5, 1) \quad \rightarrow \quad L''(-5, 1)$

Step 3 Graph $\triangle JKL$ and its image $\triangle J''K''L''$.
GuidedPractice

Triangle PQR has vertices $P(1, 1)$, $Q(2, 5)$, and $R(4, 2)$. Graph $\triangle PQR$ and its image after the indicated glide reflection.

1A. Translation: along $\langle -2, 0 \rangle$
Reflection: in x-axis

1B. Translation: along $\langle -3, -3 \rangle$
Reflection: in $y = x$

In Example 1, $\triangle JKL \cong \triangle J'K'L'$ and $\triangle J'K'L' \cong \triangle J''K''L''$. By the Transitive Property of Congruence, $\triangle JKL \cong \triangle J''K''L''$. This suggests the following theorem.

Theorem 9.1 Composition of Isometries

The composition of two (or more) isometries is an isometry.

So, the composition of two or more isometries—reflections, translations, or rotations—results in an image that is congruent to its preimage.

Example 2 Graph Other Compositions of Isometries

The endpoints of $\overline{CD}$ are $C(-7, 1)$ and $D(-3, 2)$. Graph $\overline{CD}$ and its image after a reflection in the x-axis and a rotation 90° about the origin.
Step 1 reflection in the x-axis

(x, y)	$\rightarrow$	$(x, -y)$
$C(-7, 1)$	$\rightarrow$	$C'(-7, -1)$
$D(-3, 2)$	$\rightarrow$	$D'(-3, -2)$

Step 2 rotation 90° about origin

(x, y)	$\rightarrow$	$(-y, x)$
$C'(-7, -1)$	$\rightarrow$	$C''(1, -7)$
$D'(-3, -2)$	$\rightarrow$	$D''(2, -3)$

Step 3 Graph $\overline{CD}$ and its image $\overline{C''D''}$.

GuidedPractice

Triangle ABC has vertices $A(-6, -2)$, $B(-5, -5)$, and $C(-2, -1)$. Graph $\triangle ABC$ and its image after the composition of transformations in the order listed.

2A. Translation: along $\langle 3, -1 \rangle$
Reflection: in y-axis

2B. Rotation: 180° about origin
Translation: along $\langle -2, 4 \rangle$

---

2 Compositions of Two Reflections The composition of two reflections in parallel lines is the same as a translation.

Theorem 9.2 Reflections in Parallel Lines

The composition of two reflections in parallel lines can be described by a translation vector that is

• perpendicular to the two lines, and
• twice the distance between the two lines.

The composition of two reflections in intersecting lines is the same as a rotation.

Example 3 Reflect a Figure in Two Lines

Copy and reflect figure A in line m and then line p. Then describe a single transformation that maps A onto A''.

a.

b.
Step 1 Reflect A in line m.
Step 1

Step 2 Reflect A in line p.
Step 2

By Theorem 9.2, the composition of two reflections in parallel vertical lines m and p is equivalent to a horizontal translation right $2 \cdot 1.75$ or 3.5 centimeters.
By Theorem 9.3, the composition of two reflections in intersecting lines m and p is equivalent to a $2 \cdot 60°$ or $120°$ counterclockwise rotation about the point where lines m and p intersect.

WatchOut!

Order of Composition
Be sure to compose two transformations according to the order in which they are given.

▶ **Guided**Practice

Copy and reflect figure B in line n and then line q. Then describe a single transformation that maps B onto B''.
3A.

3B.

Many patterns in the real world are created using compositions of transformations.

Real-World Example 4 Describe Transformations

STATIONERY BORDERS Describe the transformations that are combined to create each stationery border shown.

a.

The pattern is created by successive translations of the first four potted plants. So this pattern can be created by combining two reflections in lines *m* and *p* as shown. Notice that line *m* goes through the center of the preimage.
b.

The pattern is created by glide reflection. So this pattern can be created by combining a translation along translation vector $\vec{v}$ followed by a reflection over horizontal line *n* as shown.
▶ **Guided**Practice

4. **CARPET PATTERNS** Describe the transformations that are combined to create each carpet pattern shown.

23.

24. SKATEBOARDS Elizabeth has airbrushed the pattern shown onto her skateboard. What combination of transformations did she use to create the pattern?
ALGEBRA Graph each figure and its image after the indicated transformations.

25 Rotation: 90° about the origin
Reflection: in _x_-axis

$y = 3x + 1$
26. Reflection: in _x_-axis
Reflection: in _y_-axis

$y = (x - 3)^2$
27. Find the coordinates of $\triangle A''B''C''$ after a reflection in the _x_-axis and a rotation of 180° about the origin if $\triangle ABC$ has vertices $A(-3, 1)$, $B(-2, 3)$, and $C(-1, 0)$.

28. **FIGURE SKATING** Kayla is practicing her figure skating routine. What combination of transformations is needed for Kayla to start at A, skate to A', and end up at A''?

29. **DANCING** Describe the transformations combined to go from Step 1 to Step 3.
30. **PROOF** Write a paragraph proof for one case of the Composition of Isometries Theorem.

Given: A translation along $\langle a, b \rangle$ maps X to X' and Y to Y'. A reflection in z maps X' to X'' and Y' to Y''.

Prove: $\overline{XY} \cong \overline{X''Y''}$
ANIMAL TRACKS The length of an animal's stride is the distance between two consecutive tracks. The average stride length of a turkey is about 11 inches, and the average stride length of a duck is about 5 inches. Write a glide reflection that can be used to predict the location of the next track for each set of animal tracks.

31. turkey
32. duck

33. **KNITTING** Tonisha is knitting a scarf using the tumbling blocks pattern shown at the right. Describe the transformations combined to create the pattern.
Describe the transformations that combined to map each figure.

34.

35.
36. PROOF Write a two-column proof of Theorem 9.2.

Given: A reflection in line p maps $\overline{BC}$ to $\overline{B'C'}$.
A reflection in line q maps $\overline{B'C'}$ to $\overline{B''C''}$.
$p \parallel q$, $AD = x$

Prove: **a.** $\overline{BB''} \perp p$, $\overline{BB''} \perp q$

b. $BB'' = 2x$
37. PROOF Write a paragraph proof of Theorem 9.3.

Given: Lines ℓ and m intersect at point P.
A is any point not on ℓ or m.

Prove: **a.** If you reflect point A in m, and
then reflect its image A' in ℓ, A''
is the image of A after a rotation
about point P.

b. $m\angle APA'' = 2(m\angle SPR)$
H.O.T. Problems   Use Higher-Order Thinking Skills

38. ERROR ANALYSIS Daniel and Lolita are translating
$\triangle XYZ$ along $\langle 2, 2 \rangle$ and reflecting it in the line $y = 2$.
Daniel says that the transformation is a glide reflection.
Lolita disagrees and says that the transformation is a
composition of transformations. Is either of them correct?
Explain your reasoning.
39. WRITING IN MATH Do any points remain invariant
under glide reflections? under compositions of
transformations? Explain.

40. CHALLENGE If $PQRS$ is translated along $\langle 3, -2 \rangle$,
reflected in $y = -1$, and rotated 90° about the origin,
what are the coordinates of $P'''Q'''R'''S'''$?
41. REASONING If an image is to be reflected in the line
$y = x$ and the x-axis, does the order of the reflections
affect the final image? Explain.

42. OPEN ENDED Write a glide reflection or composition
of transformations that can be used to transform
$\triangle ABC$ to $\triangle DEF$.
43. REASONING When two rotations are performed on a
single image, does the order of the rotations *sometimes*,
always, or *never* affect the location of the final image?
Explain.

44. WRITING IN MATH Compare and contrast glide
reflections and compositions of transformations.

Standardized Test Practice

45. $\triangle ABC$ is translated along the vector $\langle -2, 3 \rangle$ and then reflected in the x-axis. What are the coordinates of A' after the transformation?
A $(1, -4)$

B $(1, 4)$

C $(-1, 4)$

D $(-1, -4)$

46. SHORT RESPONSE What are the coordinates of D'' if $\overline{CD}$ with vertices $C(2, 4)$ and $D(8, 7)$ is translated along $\langle -6, 2 \rangle$ and then reflected over the y-axis?

47. ALGEBRA Write $\dfrac{18x^2 - 2}{3x^2 - 5x - 2}$ in simplest terms.

F $\dfrac{18}{3x + 1}$ **H** $\dfrac{2(3x - 1)}{x - 2}$

G $\dfrac{2(3x + 1)}{x - 2}$ **J** $2(3x - 1)$

48. SAT/ACT If $f(x) = x^3 - x^2 - x$, what is the value of $f(-3)$?

A -39 **D** -15

B -33 **E** -12

C -21

Spiral Review

Copy each polygon and point X. Then use a protractor and ruler to draw the specified rotation of each figure about point X. (Lesson 9-3)

Geometry Lab
Tessellations

A **tessellation** is a pattern of one or more figures that covers a plane so that there are no overlapping or empty spaces. The sum of the angles around the vertex of a tessellation is 360°.

A **regular tessellation** is formed by only one type of regular polygon. A regular polygon will tessellate if it has an interior angle measure that is a factor of 360. A **semi-regular tessellation** is formed by two or more regular polygons.
Tennessee Curriculum Standards

✔ **3108.4.33** Use transformations to create and analyze tessellations and investigate the use of tessellations in architecture, mosaics, and artwork.

Activity 1   Regular Tessellation

Determine whether each regular polygon will tessellate in the plane. Explain.

a. hexagon

Let x represent the measure of an interior angle of a regular hexagon.

$x = \dfrac{180(n-2)}{n}$ **Interior Angle Formula**

$= \dfrac{180(6-2)}{6}$ **$n = 6$**

$= 120$ **Simplify.**

Since 120 is a factor of 360, a regular hexagon will tessellate in the plane.

b. decagon

Let x represent the measure of an interior angle of a regular decagon.

$x = \dfrac{180(n-2)}{n}$ **Interior Angle Formula**

$= \dfrac{180(10-2)}{10}$ **$n = 10$**

$= 144$ **Simplify.**

Since 144 is not a factor of 360, a regular decagon will not tessellate in the plane.

A tessellation is **uniform** if it contains the same arrangement of shapes and angles at each vertex.

Uniform

There are four angles at each vertex. The angle measures are the same at each.

Not Uniform

There are four angles at this vertex.

There are two angles at this vertex.
Activity 2 Classify Tessellations

Determine whether each pattern is a tessellation. If so, describe it as *regular*, *semi-regular*, **or** *neither* **and** *uniform* **or** *not uniform*.

a.
There is no unfilled space, and none of the figures overlap, so the pattern is a **tessellation**.

The tessellation consists of regular hexagons, squares and equilateral triangles, so it is **semi-regular**.

There are four angles around some of the vertices and five around others, so it is **not uniform**.

b.
There is unfilled space, so the pattern is a **not a tessellation**.

c.
There is no unfilled space, and none of the figures overlap, so the pattern is a **tessellation**.

The tessellation consists of trapezoids, which are not regular polygons, so it is **neither** regular nor semi-regular.

There are four angles around each of the vertices and the angle measures are the same at each vertex, so it is **uniform**.

You can use the properties of tessellations to design and create tessellations.

Activity 3 Draw a Tessellation

Draw a triangle and use it to create a tessellation.

Step 1 Draw a triangle and find the midpoint of one side.

Step 2 Rotate the triangle 180° about the point.

Step 3 Translate the pair of triangles to make a row.
Step 4 Translate the row to make a tessellation.
Geometry Lab
Tessellations *Continued*

Activity 4 Tessellations using Technology

Use Geometer's Sketchpad to create a tessellation.

Step 1 Insert three points and construct a line through two of the points. Then construct the line parallel to the first line through the third point using the **Parallel Line** option from the **Construct** menu. Complete the parallelogram and label the points *A*, *B*, *C*, and *D*. Hide the lines.

Step 2 Insert another point *E* on the exterior of the parallelogram. Draw the segments between *A* and *B*, *B* and *E*, *E* and *C*, and *C* and *D*.

Step 3 Highlight *B* and then *A*. From the **Transform** menu, choose **Mark Vector**. Select the $\overline{BE}$, $\overline{EC}$, and point *E*. From the **Transform** menu, choose **Translate**.

Step 4 Starting with *A*, select all of the vertices around the perimeter of the polygon. Choose **Hexagon Interior** from the **Construct** menu.

Step 5 Choose point *A* and then point *B* and mark the vector as you did in Step 3. Select the interior of the polygon and choose **Translate** from the **Transform** menu. Continue the tessellation by marking vectors and translating the polygon. You can choose **Color** from the **Display** menu to create a color pattern.
Exercises

Determine whether each regular polygon will tessellate in the plane. Write *yes* or *no*. Explain.

1. triangle   **2.** pentagon   **3.** 16-gon

Determine whether each pattern is a tessellation. Write *yes* or *no*. If so, describe it as *regular*, *semi-regular*, or *neither* and *uniform* or *not uniform*.

4.   **5.**   **6.**

Draw a tessellation using the following shape(s).

7. octagon and square   **8.** hexagon and triangle

9. right triangle   **10.** trapezoid and a parallelogram

11. WRITING IN MATH Find examples of the use of tessellations in architecture, mosaics, and artwork. For each example, explain how tessellations were used.

12. MAKE A CONJECTURE Describe a figure that you think will tessellate in three-dimensional space. Explain your reasoning.

- You drew reflections and rotations of figures.
(Lessons 9-1 and 9-3)

1 Identify line and rotational symmetries in two-dimensional figures.

2 Identify plane and axis symmetries in three-dimensional figures.

- In the animal kingdom, the symmetry of an animal's body is often an indication of the animal's complexity. Animals displaying line symmetry, such as insects, are usually more complex life forms than those displaying rotational symmetry, like a jellyfish.

magnitude of symmetry
plane symmetry
axis symmetry

1 Symmetry in Two-Dimensional Figures A figure has **symmetry** if there exists a rigid motion—reflection, translation, rotation, or glide reflection—that maps the figure onto itself. One type of symmetry is line symmetry.

KeyConcept Line Symmetry

A figure in the plane has **line symmetry** (or *reflection symmetry*) if the figure can be mapped onto itself by a reflection in a line, called a **line of symmetry** (or *axis of symmetry*).
🌐 Real-World Example 1 Identify Line Symmetry

BEACHES State whether the object appears to have line symmetry. Write *yes* or *no*. If so, copy the figure, draw all lines of symmetry, and state their number.

a.
Yes; the crab has one line of symmetry.

b.
Yes; the starfish has five lines of symmetry.

c.

No; there is no line in which the oyster shell can be reflected so that it maps onto itself.

▶ **GuidedPractice**

State whether the figure has line symmetry. Write *yes* or *no*. If so, copy the figure, draw all lines of symmetry, and state their number.

1A.

1B.

1C.
Another type of symmetry is rotational symmetry.

KeyConcept Rotational Symmetry

A figure in the plane has **rotational symmetry** (or *radial symmetry*) if the figure can be mapped onto itself by a rotation between 0° and 360° about the center of the figure, called the **center of symmetry** (or *point of symmetry*).

Examples The figure below has rotational symmetry because a rotation of 90°, 180°, or 270° maps the figure onto itself.

The number of times a figure maps onto itself as it rotates from 0° to 360° is called the **order of symmetry**. The **magnitude of symmetry** (or angle of rotation) is the smallest angle through which a figure can be rotated so that it maps onto itself. The order and magnitude of a rotation are related by the following equation.

$$\text{magnitude} = 360° \div \text{order}$$

The figure above has rotational symmetry of order 4 and magnitude 90°.

Example 2 Identify Rotational Symmetry

State whether the figure has rotational symmetry. Write *yes* or *no*. If so, copy the figure, locate the center of symmetry, and state the order and magnitude of symmetry.

a.
Yes; the regular hexagon has order 6 rotational symmetry and magnitude 360° ÷ 6 or 60°. The center is the intersection of the diagonals.

b.
No; no rotation between 0° and 360° maps the right triangle onto itself.

**c.**

Yes; the figure has order 2 rotational symmetry and magnitude 360° ÷ 2 or 180°. The center is the intersection of the diagonals.

GuidedPractice

FLOWERS State whether the flower appears to have rotational symmetry. Write *yes* or *no*. If so, copy the flower, locate the center of symmetry, and state the order and magnitude of symmetry.

2A.

2B.

2C.

StudyTip

Point Symmetry A figure has *point symmetry* if the figure can be mapped onto itself by a rotation of 180°. A playing card exhibits point symmetry. It looks the same right-side up as upside down.

point of symmetry

2 Symmetry in Three-Dimensional Figures   Three-dimensional figures can also have symmetry.

KeyConcept   Three-Dimensional Symmetries

Plane Symmetry

A three-dimensional figure has **plane symmetry** if the figure can be mapped onto itself by a reflection in a plane.
Axis Symmetry

A three-dimensional figure has **axis symmetry** if the figure can be mapped onto itself by a rotation between 0° and 360° in a line.
Example 3   Three-Dimensional Symmetry

State whether the figure has *plane* symmetry, *axis* symmetry, *both*, or *neither*.

ALGEBRA Graph the function and determine whether the graph has *line* and/or *rotational* symmetry. If so, state the order and magnitude of symmetry, and write the equations of any lines of symmetry.

39. $y = x$ 　　　　　　　**40.** $y = x^2 + 1$ 　　　　　　　**41.** $y = -x^3$

CRYSTALLOGRAPHY Determine whether the crystals below have *plane* symmetry and/or *axis* symmetry. If so, state the magnitude of symmetry.

42.

43.

44.
45. ⚙ **MULTIPLE REPRESENTATIONS** In this problem, you will use dynamic geometric software to investigate line and rotational symmetry in regular polygons.

　　a. Geometric Use The Geometer's Sketchpad to draw an equilateral triangle. Use the reflection tool under the transformation menu to investigate and determine all possible lines of symmetry. Then record their number.

　　b. Geometric Use the rotation tool under the transformation menu to investigate the rotational symmetry of the figure in part **a**. Then record its order of symmetry.

　　c. Tabular Repeat the process in parts **a** and **b** for a square, regular pentagon, and regular hexagon. Record the number of lines of symmetry and the order of symmetry for each polygon.

　　d. Verbal Make a conjecture about the number of lines of symmetry and the order of symmetry for a regular polygon with n sides.

H.O.T. Problems　Use Higher-Order Thinking Skills

46. ERROR ANALYSIS Jaime says that Figure A has only line symmetry, and Jewel says that Figure A has only rotational symmetry. Is either of them correct? Explain your reasoning.

Figure A

47. CHALLENGE A quadrilateral in the coordinate plane has exactly two lines of symmetry, $y = x - 1$ and $y = -x + 2$. Find possible vertices for the figure. Graph the figure and the lines of symmetry.

48. REASONING A regular polyhedron has axis symmetry of order 3, but does not have plane symmetry. What is the figure? Explain.

49. OPEN ENDED Draw a figure with line symmetry but not rotational symmetry. Explain.

50. 📝 **WRITING IN MATH** Compare and contrast line symmetry and rotational symmetry.

Standardized Test Practice

51. How many lines of symmetry can be drawn on the picture of the Canadian flag below?

A 0   **C** 2

B 1   **D** 4

52. GRIDDED RESPONSE What is the order of symmetry for the figure below?
53. ALGEBRA A computer company ships computers in wooden crates that each weigh 45 pounds when empty. If each computer weighs no more than 13 pounds, which inequality *best* describes the total weight in pounds w of a crate of computers that contains c computers?

F $c \le 13 + 45w$ **H** $w \le 13c + 45$

G $c \ge 13 + 45w$ **J** $w \ge 13c + 45$

54. SAT/ACT What is the slope of the line determined by the linear equation $5x - 2y = 10$?

A -5 **D** $\frac{2}{5}$

B $-\frac{5}{2}$ **E** $\frac{5}{2}$

C $-\frac{2}{5}$

Spiral Review

Triangle *JKL* has vertices *J*(1, 5), *K*(3, 1), and *L*(5, 7). Graph △*JKL* and its image after the indicated transformation. (Lesson 9-4)

55. Translation: along $\langle -7, -1 \rangle$
Reflection: in *x*-axis

56. Translation: along $\langle 1, 2 \rangle$
Reflection: in *y*-axis

57. Quadrilateral *QRST* is shown at the right. What is the image of point *R* after a rotation 180° counterclockwise about the origin? (Lesson 9-3)
58. AMUSEMENT PARKS From the top of a roller coaster, 60 yards above the ground, a rider looks down and sees the merry-go-round and the Ferris wheel. If the angles of depression are 11° and 8° respectively, how far apart are the merry-go-round and the Ferris wheel? (Lesson 8-5)

Skills Review

Determine whether the dilation from Figure A to Figure B is an *enlargement* or a *reduction*. Then find the scale factor of the dilation. (Lesson 7-6)

59.

60.

61.
Dilations

··Then
- You identified dilations and verified them as similarity transformations. (Lesson 7-6)

··Now
1. Draw dilations.
2. Draw dilations in the coordinate plane.

··Why?
- Some photographers still prefer traditional cameras and film to produce negatives. From these negatives, photographers can create scaled reproductions.

1 Draw Dilations A dilation or *scaling* is a similarity transformation that enlarges or reduces a figure proportionally with respect to a *center* point and a *scale* factor.

KeyConcept Dilation

A dilation with center C and positive scale factor k, $k \neq 1$, maps a point P in a figure to its image such that
- if point P and C coincide, then the image and preimage are the same point, or
- if point P is not the center of dilation, then P' lies on $\overrightarrow{CP}$ and $CP' = k(CP)$.
$\triangle L'M'P'$ is the image of $\triangle LMP$ under a dilation with center C and scale factor of 2.5.

Example 1 Draw a Dilation

Copy $\triangle ABC$ and point D. Then use a ruler to draw the image of $\triangle ABC$ under a dilation with center D and scale factor $\frac{1}{2}$.

Step 1 Draw rays from D though each vertex.

Step 2 Locate A' on $\overrightarrow{DA}$ such that $DA' = \frac{1}{2}DA$.

Step 3 Locate B' on $\overrightarrow{DB}$ and C' on $\overrightarrow{DC}$ in the same way. Then draw $\triangle A'B'C'$.
GuidedPractice

Copy the figure and point J. Then use a ruler to draw the image of the figure under a dilation with center J and the scale factor k indicated.

1A. $k = \frac{3}{2}$

1B. $k = 0.75$

In Lesson 7-6, you also learned that if $k > 1$, then the dilation is an *enlargement*. If $0 < k < 1$, then the dilation is a *reduction*. Since $\frac{1}{2}$ is between 0 and 1, the dilation in Example 1 is a reduction.

A dilation with a scale factor of 1 is called an *isometry dilation*. It produces an image that coincides with the preimage. The two figures are congruent.

🌐 Real-World Example 2 Find the Scale Factor of a Dilation

PHOTOGRAPHY To create different-sized prints, you can adjust the distance between a film negative and the enlarged print by using a photographic enlarger. Suppose the distance between the light source C and the negative is 45 millimeters (CP). To what distance PP' should you adjust the enlarger to create a 22.75-centimeter wide print ($X'Y'$) from a 35-millimeter wide negative (XY)?
Understand This problem involves a dilation. The center of dilation is C, $XY = 35$ mm, $X'Y' = 22.75$ cm or 227.5 mm, and $CP = 45$ mm. You are asked to find PP'.

Plan Find the scale factor of the dilation from the preimage XY to the image $X'Y'$. Use the scale factor to find CP' and then use CP and CP' to find PP'.

Solve The scale factor k of the enlargement is the ratio of a length on the image to a corresponding length on the preimage.

$$k = \frac{\text{image length}}{\text{preimage length}} \qquad \text{Scale factor of image}$$

$$= \frac{X'Y'}{XY} \qquad \text{image} = X'Y', \text{ preimage} = XY$$

$$= \frac{227.5}{35} \text{ or } 6.5 \qquad \text{Divide.}$$

Use this scale factor of 6.5 to find CP'.

$$CP' = k(CP) \qquad \text{Definition of dilation}$$

$$= 6.5(45) \qquad k = 6.5 \text{ and } CP = 45$$

$$= 292.5 \qquad \text{Multiply.}$$

Use CP' and CP to find PP'.

$$CP + PP' = CP' \qquad \text{Segment Addition}$$

$$45 + PP' = 292.5 \qquad CP = 45 \text{ and } CP' = 292.5$$

$$PP' = 247.5 \qquad \text{Subtract 45 from each side.}$$

So the enlarger should be adjusted so that the distance from the negative to the enlarged print (PP') is 247.5 millimeters or 24.75 centimeters.

Check Since the dilation is an enlargement, the scale factor should be greater than 1. Since $6.5 > 1$, the scale factor found is reasonable. ✔

Problem-Solving Tip

Use Estimation To prevent careless errors in your calculations, estimate the answer to a problem before solving. In Example 2, you can estimate the scale factor of the dilation to be about $\frac{240}{40}$ or 6. Then CP' would be about $6 \cdot 50$ or 300 and PP' about $300 - 50$ or 250 millimeters, which is 25 centimeters. A measure of 24.7 centimeters is close to this estimate, so the answer is reasonable.

2. Determine whether the dilation from Figure Q to Q' is an *enlargement* or a *reduction*. Then find the scale factor of the dilation and x.
2 Dilations in the Coordinate Plane

You can use the following rules to find the image of a figure after a dilation centered at the origin.

KeyConcept Dilations in the Coordinate Plane

Words   To find the coordinates of an image after a dilation centered at the origin, multiply the *x*- and *y*-coordinates of each point on the preimage by the scale factor of the dilation, *k*.

Symbols $(x, y) \rightarrow (kx, ky)$

Example
scale factor = 2

Example 3 Dilations in the Coordinate Plane

Quadrilateral *JKLM* has vertices $J(-2, 4)$, $K(-2, -2)$, $L(-4, -2)$, and $M(-4, 2)$. Graph the image of *JKLM* after a dilation centered at the origin with a scale factor of 2.5.

Multiply the *x*- and *y*-coordinates of each vertex by the scale factor, 2.5.

$(x, y) \qquad \rightarrow \quad (2.5x, 2.5y)$

$J(-2, 4) \qquad \rightarrow \quad J'(-5, 10)$

$K(-2, -2) \quad \rightarrow \quad K'(-5, -5)$

$L(-4, -2) \quad \rightarrow \quad L'(-10, -5)$

$M(-4, 2) \quad \rightarrow \quad M'(-10, 5)$

Graph *JKLM* and its image *J'K'L'M'*.
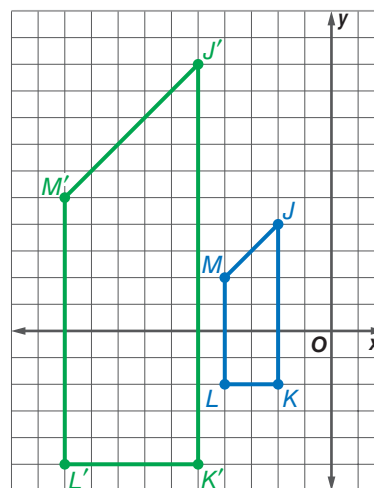

GuidedPractice

Find the image of each polygon with the given vertices after a dilation centered at the origin with the given scale factor.

3A. $Q(0, 6)$, $R(-6, -3)$, $S(6, -3)$; $k = \dfrac{1}{3}$ **3B.** $A(2, 1)$, $B(0, 3)$, $C(-1, 2)$, $D(0, 1)$; $k = 2$

Example 1   Copy the figure and point *M*. Then use a ruler to draw the image of the figure under a dilation with center *M* and the scale factor *k* indicated.

1. $k = \frac{1}{4}$

2. $k = 2$

Example 2   **3** Determine whether the dilation from Figure *B* to *B'* is an *enlargement* or a *reduction*. Then find the scale factor of the dilation and *x*.

4. BIOLOGY Under a microscope, a single-celled organism 200 microns in length appears to be 50 millimeters long. If 1 millimeter = 1000 microns, what magnification setting (scale factor) was used? Explain your reasoning.

Example 3   Graph the image of each polygon with the given vertices after a dilation centered at the origin with the given scale factor.

5. $W(0, 0), X(6, 6), Y(6, 0); k = 1.5$

6. $Q(-4, 4), R(-4, -4), S(4, -4), T(4, 4); k = \frac{1}{2}$

7. $A(-1, 4), B(2, 4), C(3, 2), D(-2, 2); k = 2$

8. $J(-2, 0), K(2, 4), L(8, 0), M(2, -4); k = \frac{3}{4}$

Practice and Problem Solving   **Extra Practice begins on page 969.**

Example 1   Copy the figure and point *S*. Then use a ruler to draw the image of the figure under a dilation with center *S* and the scale factor *k* indicated.

9. $k = \frac{5}{2}$
10. $k = 3$

11. $k = 0.8$
12. $k = \frac{1}{3}$
13. $k = 2.25$
14. $k = \frac{7}{4}$
Example 2 Determine whether the dilation from figure W to W' is an *enlargement* or a *reduction*. Then find the scale factor of the dilation and x.

15.
16.
17.
18.
INSECTS When viewed under a microscope, each insect has the measurement given on the picture. Given the actual measure of each insect, what magnification was used? Explain your reasoning.

19.

Cat Flea
Actual Length: 2.5 mm

20.
Spider Mite
Actual Length: 0.5 mm

Example 3 Find the image of each polygon with the given vertices after a dilation centered at the origin with the given scale factor.

21 $J(-8, 0), K(-4, 4), L(-2, 0); k = 0.5$

22. $S(0, 0), T(-4, 0), V(-8, -8); k = 1.25$

23. $A(9, 9), B(3, 3), C(6, 0); k = \frac{1}{3}$

24. $D(4, 4), F(0, 0), G(8, 0); k = 0.75$

25. $M(-2, 0), P(0, 2), Q(2, 0), R(0, -2); k = 2.5$

26. $W(2, 2), X(2, 0), Y(0, 1), Z(1, 2); k = 3$

27. COORDINATE GEOMETRY Refer to the graph of $FGHJ$.

    a. Dilate $FGHJ$ by a scale factor of $\frac{1}{2}$ centered at the origin, and then reflect the dilated image in the y-axis.

    b. Complete the composition of transformations in part **a** in reverse order.

    c. Does the order of the transformations affect the final image?

    d. Will the order of a composition of a dilation and a reflection *always*, *sometimes*, or *never* affect the dilated image? Explain your reasoning.
28. **PHOTOGRAPHY AND ART** To make a scale drawing of a photograph, students overlay a $\frac{1}{4}$-inch grid on a 5-inch by 7-inch high contrast photo, overlay a $\frac{1}{2}$-inch grid on a 10-inch by 14-inch piece of drawing paper, and then sketch the image in each square of the photo to the corresponding square on the drawing paper.

   a. What is the scale factor of the dilation?

   b. To create an image that is 10 times as large as the original, what size grids are needed?

   c. What would be the area of a grid drawing of a 5-inch by 7-inch photo that used 2-inch grids?

29. **MEASUREMENT** Determine whether the image shown is a dilation of *ABCD*. Explain your reasoning.
30. **COORDINATE GEOMETRY** *WXYZ* has vertices *W*(6, 2), *X*(3, 7), *Y*(−1, 4), and *Z*(4, −2).

   a. Graph *WXYZ* and find the perimeter of the figure. Round to the nearest tenth.

   b. Graph the image of *WXYZ* after a dilation of $\frac{1}{2}$ centered at the origin.

   c. Find the perimeter of the dilated image. Round to the nearest tenth. How is the perimeter of the dilated image related to the perimeter of *WXYZ*?

31. **CHANGING DIMENSIONS** A three-dimensional figure can also undergo a dilation. Consider the rectangular prism shown.
   a. Find the surface area and volume of the prism.

   b. Find the surface area and volume of the prism after a dilation with a scale factor of 2.

   c. Find the surface area and volume of the prism after a dilation with a scale factor of $\frac{1}{2}$.

   d. How many times as great is the surface area and volume of the image as the preimage after each dilation?

   e. Make a conjecture as to the effect a dilation with a positive scale factor *r* would have on the surface area and volume of a prism.

32. **COORDINATE GEOMETRY** Refer to the graph of △*DEF*.

   a. Graph the dilation of △*DEF* centered at point *D* with a scale factor of 3.

   b. Describe the dilation as a composition of transformations including a dilation with a scale factor of 3 centered at the origin.

   c. If a figure is dilated by a scale factor of 3 with a center of dilation (*x*, *y*), what composition of transformations, including a dilation with a scale factor of 3 centered at the origin, will produce the same final image?
33 HEALTH A coronary artery may be dilated with a balloon catheter as shown. The cross section of the middle of the balloon is a circle.

a. A surgeon inflates a balloon catheter in a patient's coronary artery, dilating the balloon from a diameter of 1.5 millimeters to 2 millimeters. Find the scale factor of this dilation.

b. Find the cross-sectional area of the balloon before and after the dilation.

Deflated balloon in artery

Inflated balloon in artery
Each figure shows a preimage and its image after a dilation centered at point P. Copy each figure, locate point P, and estimate the scale factor.

34.

35.

36. **MULTIPLE REPRESENTATIONS** In this problem, you will investigate dilations centered at the origin with negative scale factors.

a. **Geometric** Draw $\triangle ABC$ with points $A(-2, 0)$, $B(2, -4)$, and $C(4, 2)$. Then draw the image of $\triangle ABC$ after a dilation centered at the origin with a scale factor of -2. Repeat the dilation with scale factors of $-\frac{1}{2}$ and -3. Record the coordinates for each dilation.

b. **Verbal** Make a conjecture about the function relationship for a dilation centered at the origin with a negative scale factor.

c. **Analytical** Write the function rule for a dilation centered at the origin with a scale factor of $-k$.

d. **Verbal** Describe a dilation centered at the origin with a negative scale factor as a composition of transformations.

H.O.T. Problems Use Higher-Order Thinking Skills

37. CHALLENGE Find the equation for the dilated image of the line $y = 4x - 2$ if the dilation is centered at the origin with a scale factor of 1.5.

38. WRITING IN MATH Are parallel lines (parallelism) and collinear points (collinearity) preserved under all transformations? Explain.

39. REASONING Determine whether invariant points are *sometimes*, *always*, or *never* maintained for the transformations described below. If so, describe the invariant point(s). If not, explain why invariant points are not possible.

a. dilation of $ABCD$ with scale factor 1

b. rotation of $\overline{AB}$ 74° about B

c. reflection of $\triangle MNP$ in the x-axis

d. translation of $PQRS$ along $\langle 7, 3 \rangle$

e. dilation of $\triangle XYZ$ centered at the origin with scale factor 2

40. OPEN ENDED Graph a triangle. Dilate the triangle so that its area is four times the area of the original triangle. State the scale factor and center of your dilation.

41. WRITING IN MATH List the transformations that result in congruent figures, similar figures, and equal figures. Explain your reasoning.

Standardized Test Practice

42. EXTENDED RESPONSE Quadrilateral *PQRS* was dilated to form quadrilateral *WXYZ*.
  a. Is the dilation from *PQRS* to *WXYZ* an enlargement or reduction?

  b. Which number *best* represents the scale factor for this dilation?

43. ALGEBRA How many ounces of pure water must a pharmacist add to 50 ounces of a 15% saline solution to make a solution that is 10% saline?

  A 25   **C** 15

  B 20   **D** 5

44. Tionna wants to replicate a painting in an art museum. The painting is 3 feet wide and 6 feet long. She decides on a dilation reduction factor of 0.25. What size paper should she use?

  F 4 in. × 8 in.   **H** 8 in. × 16 in.

  G 6 in. × 12 in.   **J** 10 in. × 20 in.

45. SAT/ACT For all x, $(x - 7)^2 = ?$

  A $x^2 - 49$ **D** $x^2 - 14x + 49$

  B $x^2 + 49$ **E** $x^2 + 14x - 49$

  C $x^2 - 14x - 49$

Spiral Review

State whether the figure appears to have line symmetry. Write *yes* or *no*. If so, copy the figure, draw all lines of symmetry, and state their number. (Lesson 9-5)

46.

47.

48.
Describe the transformations that combined to map each figure. (Lesson 9-4)

49.

50.
51. PAINTING A painter sets a ladder up to reach the bottom of a second-story window 16 feet above the ground. The base of the ladder is 12 feet from the house. While the painter mixes the paint, a neighbor's dog bumps the ladder, which moves the base 2 feet farther away from the house. How far up the side of the house does the ladder reach? (Lesson 8-2)
Skills Review

Find the value of x. (Lesson 0-5)

52. $58.9 = 2x$

53. $\dfrac{108.6}{\pi} = x$

54. $228.4 = \pi x$

55. $\dfrac{336.4}{x} = \pi$
In Lesson 9-6, you dilated images by multiplying the *x*- and *y*-coordinates by a scale factor and graphing the resulting image. Transformations can also be performed by using a matrix, which is a rectangular group of numbers arranged in rows or columns. A matrix can represent a figure in the coordinate plane in which the first row corresponds to the *x*-coordinates of the figure and the second row corresponds to the *y*-coordinates, as shown below.
$$\begin{bmatrix} 3 & 7 & 1 \\ 3 & 1 & -2 \end{bmatrix} \begin{matrix} \leftarrow x\text{-coordinates} \\ \leftarrow y\text{-coordinates} \end{matrix}$$

In the following activities you will perform transformations by using matrix operations on a graphing calculator. Under the **MATRIX** menu, select **EDIT**. Enter the values in the appropriate rows and columns as shown at the right.

Activity 1   Perform Transformations by Using Matrix Addition

Step 1 Enter a 2 × 3 matrix that represents a triangle with vertices (3, 2), (6, 6), and (1, 7) as [A].
Step 2 Enter $\begin{bmatrix} 3 & 3 & 3 \\ 0 & 0 & 0 \end{bmatrix}$ into matrix [B] on your calculator. Then find [A] + [B].
Analyze the Results

1. Graph the triangle from Step 1. Use the result from [A] + [B] to graph a second triangle. What kind of transformation do you observe?

2. Enter $\begin{bmatrix} 2 & 2 & 2 \\ -6 & -6 & -6 \end{bmatrix}$ into matrix [C]. Then find [A] + [C]. Graph the triangle from Step 1 and the sum of [A] + [C]. Describe the type of transformation that occurs.

3. What matrix would you add to [A] in order to get $\begin{bmatrix} 7 & 10 & 5 \\ 5 & 9 & 10 \end{bmatrix}$?

Activity 2   Perform Transformations by Using Matrix Multiplication

Step 1 Enter a 2 × 3 matrix as **[A]** that represents a triangle with vertices (1, 1), (5, 2), and (4, 6).

Step 2 Enter $\begin{bmatrix} 0 & -1 \\ 1 & 0 \end{bmatrix}$ into matrix **[B]** on your calculator. Then find **[B] * [A]**.
Analyze the Results

4. Graph the triangle from Step 1. Use the result from **[B] * [A]** to graph a second triangle. What kind of transformation do you observe?

5. Enter $\begin{bmatrix} 1 & 0 \\ 0 & -1 \end{bmatrix}$ into matrix **[B]**. Then find **[B] * [A]**. Graph the triangle from Step 1 and the product of **[B] * [A]**. Describe the type of transformation that occurs.

6. By what matrix would you multiply **[A]** in order to get $\begin{bmatrix} 1 & 2 & 6 \\ 1 & 5 & 4 \end{bmatrix}$?

Activity 3   Perform Transformations by Using Scalar Multiplication

Step 1 Enter a matrix as **[A]** that represents a triangle with vertices (2, 4), (6, 0), and (4, 6).

Step 2 Multiply **[A]** by 0.5 in your calculator.
Analyze the Results

7. Graph the triangle from Step 1. Use the result from **[A] * 0.5** to graph a second triangle. What kind of transformation do you observe?

8. Multiply **[A]** by 2. Graph the triangle from Step 1 and the product of **[A] * 2**. Describe the type of transformation that occurs.

9. **MAKE A CONJECTURE** What type of matrix operation would you use to perform each transformation?

    a. rotation   **b.** translation   **c.** dilation   **d.** reflection

Study Guide

KeyConcepts

Reflections (Lesson 9-1)

- A reflection is a transformation representing a flip of a figure over a point, line, or plane.

Translations (Lesson 9-2)

- A translation is a transformation that moves all points of a figure the same distance in the same direction.
- A translation maps each point to its image along a translation vector.

Rotations (Lesson 9-3)

- A rotation turns each point in a figure through the same angle about a fixed point.

Compositions of Transformations (Lesson 9-4)

- A translation can be represented as a composition of reflections in parallel lines and a rotation can be represented as a composition of reflections in intersecting lines.

Symmetry (Lesson 9-5)

- The line of symmetry in a figure is a line where the figure could be folded in half so that the two halves match exactly.
- The number of times a figure maps onto itself as it rotates from 0° to 360° is called the order of symmetry.
- The magnitude of symmetry is the smallest angle through which a figure can be rotated so that it maps onto itself.

Dilations (Lesson 9-6)

- Dilations enlarge or reduce figures proportionally.

FOLDABLES StudyOrganizer

VocabularyCheck

Choose the term that best completes each sentence.

1. When a transformation is applied to a figure, and then another transformation is applied to its image, this is a(n) (composition of transformations, order of symmetries).

2. If a figure is folded across a straight line and the halves match exactly, the fold line is called the (line of reflection, line of symmetry).

3. A (dilation, glide reflection) enlarges or reduces a figure proportionally.

4. The number of times a figure maps onto itself as it rotates from 0° to 360° is called the (magnitude of symmetry, order of symmetry).

5. A (line of reflection, translation vector) is the same distance from each point of a figure and its image.

6. A figure has (a center of rotation, symmetry) if it can be mapped onto itself by a rigid motion.

7. A glide reflection includes both a reflection and a (rotation, translation).

8. To rotate a point (90°, 180°) counterclockwise about the origin, multiply the y-coordinate by -1 and then interchange the x- and y-coordinates.

9. A (vector, reflection) is a congruence transformation.

10. A figure has (plane symmetry, rotational symmetry) if the figure can be mapped onto itself by a rotation between 0° and 360° about the center of the figure.

Lesson-by-Lesson Review

9-1 Reflections (pp. 613–621)

Graph each figure and its image under the given reflection.

11. rectangle *ABCD* with *A*(2, −4), *B*(4, −6), *C*(7, −3), and *D*(5, −1) in the *x*-axis

12. triangle *XYZ* with *X*(−1, 1), *Y*(−1, −2), and *Z*(3, −3) in the *y*-axis

13. quadrilateral *QRST* with *Q*(−4, −1), *R*(−1, 2), *S*(2, 2), and *T*(0, −4) in the line $y = x$

14. **ART** Anita is making the two-piece sculpture shown for a memorial garden. In her design, one piece of the sculpture is a reflection of the other, to be placed beside a sidewalk that would be located along the line of reflection. Copy the figures and draw the line of reflection.
Example 1

Graph △*JKL* with vertices *J*(1, 4), *K*(2, 1), and *L*(6, 2) and its reflected image in the *x*-axis.

Multiply the *y*-coordinate of each vertex by −1.

(x, y)	→	$(x, -y)$
J(1, 4)	→	*J*′(1, −4)
K(2, 1)	→	*K*′(2, −1)
L(6, 2)	→	*L*′(6, −2)

Graph △*JKL* and its image △*J'K'L'*.

9-2 Translations (pp. 624–630)

15. Graph △*ABC* with vertices *A*(0, −1), *B*(2, 0), *C*(3, −3) and its image along ⟨−5, 4⟩.

16. Copy the figure and the given translation vector. Then draw the translation of the figure along the translation vector.

17. **DANCE** Five dancers are positioned onstage as shown. Dancers *B*, *F*, and *C* move along ⟨0, −2⟩, while dancer *A* moves along ⟨5, −1⟩. Draw the dancers' final positions.
Example 2

Graph △*XYZ* with vertices *X*(2, 2), *Y*(5, 5), *Z*(5, 3) and its image along ⟨−3, −5⟩.

The vector indicates a translation 3 units left and 5 units down.

(x, y)	→	$(x - 3, y - 5)$
X(2, 2)	→	*E*′(−1, −3)
Y(5, 5)	→	*F*′(2, 0)
Z(5, 3)	→	*G*′(2, −2)

Graph △*XYZ* and its image △*X'Y'Z'*.

CLE 3108.3.2, SPI 3108.3.3, CLE 3108.4.7
9-3 Rotations (pp. 632–638)

18. Copy trapezoid *CDEF* and point *P*. Then use a protractor and ruler to draw a 50° rotation of *CDEF* about point *P*.

Graph each figure and its image after the specified rotation about the origin.

19. △*MNO* with vertices *M*(−2, 2), *N*(0, −2), *O*(1, 0); 180°

20. △*DGF* with vertices *D*(1, 2), *G*(2, 3), *F*(1, 3); 90°

Each figure shows a preimage and its image after a rotation about a point *P*. Copy each figure, locate point *P*, and find the angle of rotation.

21.

22.

Example 3

Triangle *ABC* has vertices *A*(−4, 0), *B*(−3, 4), and *C*(−1, 1). Graph △*ABC* and its image after a rotation 270° about the origin.

One method to solve this is to combine a 180° rotation with a 90° rotation. Multiply the *x*- and *y*-coordinates of each vertex by −1.

$(x, y) \rightarrow (-x, -y)$

$A(-4, 0) \rightarrow A'(4, 0)$

$B(-3, 4) \rightarrow B'(3, -4)$

$C(-1, 1) \rightarrow C'(1, -1)$

Multiply the *y*-coordinate of each vertex by −1 and interchange.

$(-x, -y) \rightarrow (-y, x)$

$A'(4, 0) \rightarrow A'(0, -4)$

$B'(3, -4) \rightarrow B'(-4, -3)$

$C'(1, -1) \rightarrow C'(-1, -1)$

Graph △*ABC* and its image △*A′B′C′*.

CLE 3108.3.2, ✔3108.4.31, ✔3108.4.34

9-4 Compositions of Transformations (pp. 641–649)

Graph each figure with the given vertices and its image after the indicated transformation.

23. $\overline{CD}$: *C*(3, 2) and *D*(1, 4)
Reflection: in *y* = *x*
Rotation: 270° about the origin.

24. $\overline{GH}$: *G*(−2, −3) and *H*(1, 1)
Translation: along ⟨4, 2⟩
Reflection: in the *x*-axis

25. PATTERNS Jeremy is creating a pattern for the border of a poster using a stencil. Describe the transformation combination that he used to create the pattern below.

Example 4

The endpoints of $\overline{RS}$ are *R*(4, 3) and *S*(1, 1). Graph $\overline{RS}$ and its image after a translation along ⟨−5, −1⟩ and a rotation 180° about the origin.

Step 1 translation along ⟨−5, −1⟩

$(x, y) \rightarrow (x - 5, y - 1)$

$R(4, 3) \rightarrow R'(-1, 2)$
$S(1, 1) \rightarrow S'(-4, 0)$

Step 2 rotation 180° about origin

$(x, y) \rightarrow (-x, -y)$

$R'(-1, 2) \rightarrow R''(1, -2)$

$S'(-4, 0) \rightarrow S''(4, 0)$

26. Copy and reflect figure *T* in line ℓ and then line *m*. Then describe a single transformation that maps *T* onto *T″*.

Graph $\overline{RS}$ and its image $\overline{R''S''}$.
9-5 Symmetry (pp. 653–659)

State whether each figure appears to have line symmetry. Write *yes* or *no*. If so, copy the figure, draw all lines of symmetry, and state their number.

27.
28.

State whether each figure has rotational symmetry. Write *yes* or *no*. If so, copy the figure, locate the center of symmetry, and state the order and magnitude of symmetry.

29.
30.

31. KNITTING Amy is creating a pattern for a scarf she is knitting for her friend. How many lines of symmetry are there in the pattern?
Example 5

State whether each figure has *plane* symmetry, *axis* symmetry, *both*, or *neither*.

a.

The light bulb has both plane and axis symmetry.

b.

The prism has plane symmetry.

CLE 3108.3.2, SPI 3108.3.3, CLE 3108.4.7
9-6 Dilations (pp. 660–667)

32. Copy the figure and point *S*. Then use a ruler to draw the image of the figure under a dilation with center *S* and scale factor *r* = 1.25.
33. Determine whether the dilation from figure *W* to *W′* is an *enlargement* or a *reduction*. Then find the scale factor of the dilation and *x*.
34. **CLUBS** The members of the Math Club use an overhead projector to make a poster. If the original image was 6 inches wide, and the image on the poster is 4 feet wide, what is the scale factor of the enlargement?

Example 6

Square *ABCD* has vertices *A*(0, 0), *B*(0, 8), *C*(8, 8), and *D*(8, 0). Find the image of *ABCD* after a dilation centered at the origin with a scale factor of 0.5.

Multiply the *x*- and *y*-coordinates of each vertex by the scale factor, 0.5.

(*x*, *y*)	→	(0.5*x*, 0.5*y*)
A(0, 0)	→	*A′*(0, 0)
B(0, 8)	→	*B′*(0, 4)
C(8, 8)	→	*C′*(4, 4)
D(8, 0)	→	*D′*(4, 0)

Graph *ABCD* and its image *A′B′C′D′*.
Copy the figure and the given line of reflection. Then draw the reflected image in this line using a ruler.

1.

2.
3. PROJECTS Eduardo wants to enlarge the picture below to 4 inches by 6 inches for a school project. If his school's copy machine can only enlarge up to 150% by whole number percents, find two whole number percents by which he can enlarge the piece and get as close to 4 inches by 6 inches or less.

3 in.

2 in.

Copy the figure and point *M*. Then use a ruler to draw the image of the figure under a dilation with center *M* and the scale factor *r* indicated.

4. $r = 1.5$

5. $r = \dfrac{1}{3}$

6. PARKS Isabel is on a ride at an amusement park that slides the rider to the right, and then rotates counterclockwise about its own center 60° every 2 seconds. How many seconds pass before Isabel returns to her starting position?

**State whether each figure has *plane* symmetry, *axis* symmetry, *both*, or *neither*.**

7.

8.
Graph each figure and its image under the given transformation.

9. □*FGHJ* with vertices $F(-1, -1)$, $G(-2, -4)$, $H(1, -4)$, and $J(2, -1)$ in the *x*-axis

10. △*ABC* with vertices $A(0, -1)$, $B(2, 0)$, $C(3, -3)$; $\langle -5, 4 \rangle$

11. quadrilateral *WXYZ* with vertices $W(2, 3)$, $X(1, 1)$, $Y(3, 0)$, $Z(5, 2)$; 180° about the origin

Copy the figure and the given translation vector. Then draw the translation of the figure along the translation vector.

12.

13.
14. ART An artist's rendition of what Stonehenge, a famous archeological site in England, would have looked like before the stones fell or were removed, is shown below. What is the order and magnitude of symmetry for the outer ring?
15. MULTPLE CHOICE What transformation or combination of transformations does the figure below represent?

A dilation

B glide reflection

C rotation

D translation

Preparing for Standardized Tests

Work Backward

In most problems, a set of conditions or facts is given and you must find the end result. However, some problems give you the end result and ask you to find something that happened earlier in the process. To solve problems like this, you must work backward.

Strategies for Working Backward

Step 1

Look for keywords that indicate you will need to work backward to solve the problem.

Sample Keywords:

- What was the **original**…?
- What was the value **before**…?
- Where was the **starting** or **beginning**…?

Step 2

Undo the steps given in the problem statement to solve.

- List the sequence of steps from the beginning to the end result.
- Begin with the end result. Retrace the steps in reverse order.
- "Undo" each step using inverses to get back to the original value.

Step 3

Check your solution if time permits.

- Make sure your answer makes sense.
- Begin with your answer and follow the steps in the problem statement forward to see if you get the same end result.

SPI 3108.3.3

Test Practice Example

Solve the problem below. Responses will be graded using the short-response scoring rubric shown.

Kelly is using a geometry software program to experiment with transformations on the coordinate grid. She began with a point and translated it 4 units up and 8 units left. Then she reflected the image across the x-axis. Finally, she dilated this new image by a scale factor of 0.5 with the origin to arrive at $(-1, -4)$. What were the original coordinates of the point?

Scoring Rubric	
Criteria	Score
Full Credit: The answer is correct and a full explanation is provided that shows each step.	2
Partial Credit: • The answer is correct, but the explanation is incomplete. • The answer is incorrect, but the explanation is correct.	1
No Credit: Either an answer is not provided or the answer does not make sense.	0

⋮   Read the problem statement carefully. You are given a sequence of transformations of a point on a coordinate grid. You know the coordinates of the final image and are asked to find the original coordinates. Undo each transformation in reverse order to work backward and solve the problem.

Example of a 2-point response:

original point → translation → reflection → dilation → end result

Begin with the coordinates of the end result and work backward.

Dilate by 2 to undo the dilation by 0.5:

$(-1, -4) \rightarrow (-1 \times 2, -4 \times 2) = (-2, -8)$

Reflect back across the *x*-axis to undo the reflection:

$(-2, -8) \rightarrow (-2, 8)$

Translate 4 units down and 8 units right to undo the translation:

$(-2, 8) \rightarrow (-2 + 8, 8 - 4) = (6, 4)$

The original coordinates of the point were $(6, 4)$.

The steps, calculations, and reasoning are clearly stated. The student also arrives at the correct answer. So, this response is worth the full 2 points.

Exercises

Solve each problem. Show your work. Responses will be graded using the short-response scoring rubric given at the beginning of the lesson.

1. A flea landed on a coordinate grid. The flea hopped across the *x*-axis and then across the *y*-axis in the form of two consecutive reflections. Then it walked 9 units to the right and 4 units down. If the flea's final position was at $(4, -1)$, what point did it originally land on?

2. The coordinate grid below shows the final image when a point was rotated 90° clockwise about the origin, dilated by a scale factor of 2, and shifted 7 units right. What were the original coordinates?
3. Figure *ABCD* is an isosceles trapezoid.
Which of the following are the coordinates of an endpoint of the median of *ABCD*?

A $\left(\dfrac{a+b}{2}, \dfrac{a+b}{2}\right)$ **C** $\left(\dfrac{c}{2}, 0\right)$

B $\left(\dfrac{2c-a}{2}, \dfrac{b}{2}\right)$ **D** $\left(\dfrac{c}{2}, b\right)$

**4.** If the measure of an interior angle of a regular polygon is 108, what type of polygon is it?

A octagon   **C** pentagon

B hexagon   **D** triangle

Standardized Test Practice
Cumulative, Chapters 1 through 9

Multiple Choice

Read each question. Then fill in the correct answer on the answer document provided by your teacher or on a sheet of paper.

1. Point N has coordinates $(4, -3)$. What will the coordinates of its image be after a reflection across the y-axis?

   A $N'(-3, 4)$

   B $N'(-4, 3)$

   C $N'(4, 3)$

   D $N'(-4, -3)$

2. Which pair of figures shows a reflection across the line followed by a translation up?

F   **H**

G   **J**
3. What is the angle of rotation that maps point T onto T' in the figure below?

   A $90°$ **C** $135°$

   B $120°$ **D** $145°$
Test-TakingTip

Question 3 How many points are there on the star? Divide 360° by this number to find the angle of rotation from one point to the next.

4. Given: $a \parallel b$

Which statement below justifies the conclusion that $\angle 1 \cong \angle 2$?

   F If $a \parallel b$ and are cut by transversal t, then alternate exterior angles are congruent.

   G If $a \parallel b$ and are cut by transversal t, then alternate interior angles are congruent.

   H If $a \parallel b$ and are cut by transversal t, then corresponding angles are congruent.

   J If $a \parallel b$ and are cut by transversal t, then vertical angles are congruent.

5. What is the geometric mean of 8 and 18?

   A 9   **C** 11

   B 10   **D** 12

6. Which of the following is a side length in isosceles triangle DEF?

   F 2 cm   **H** 9 cm

   G 8 cm   **J** 11 cm
7. Which of the following has exactly two pairs of consecutive congruent sides?

   A kite

   B parallelogram

   C rhombus

   **D** trapezoid

Record your answers on the answer sheet provided by your teacher or on a sheet of paper.

8. State whether the figure has rotational symmetry. If so, copy the figure, locate the center, and state the order and magnitude of symmetry.
**9.** Dilate the figure shown on the coordinate grid by a scale factor of 1.5 centered at the origin.

10. Complete the following statement.

According to the Angle Bisector Theorem, if a point is on the bisector of an angle, then it is _____ .

11. Regina left her office downtown and traveled 3 blocks west and 5 blocks north. Write a translation vector to describe her route.

12. What is the interior angle measure of the regular pentagon?
13. GRIDDED RESPONSE A group of 75 students were asked what types of movies they like to watch. The results are shown in the Venn diagram.
How many students said that they like to watch action and drama movies, but not comedy?

Extended Response

Record your answers on a sheet of paper. Show your work.

14. Rodrigo is making a scale model.

a. The actual length of the Golden Gate Bridge is about 9000 feet. If Rodrigo's model is 45 inches, what is the scale of his model?

b. How wide will Rodrigo's model of the bridge be if the actual width is 90 feet?

c. In Rodrigo's model, the tower will be 2.5 inches above the roadway. How high above the roadway is the actual tower?
